

A BULL MARKET is a period of generally rising prices. The start of a bull market is marked by widespread pessimism. This is the point when the crowd is the most bearish. The feeling of despondency changes to hope, optimism and eventually euphoria, as the bull runs its course. This often leads the economic cycle, for example in a full recession, or before a recession starts.

The bullish investor buys up lots of stock and is optimistic about the future

TYPICAL BULL MARKET

A typical bull market lasts 4.7 years, with average total returns of $159 \%$ per bull market period!*

A BEAR MARKET is a general decline in the stock market over a period of time. It is a transition from high investor optimism to widespread investor fear and pessimism. According to The Vanguard Group, "While there's no agreed-upon definition of a bear market, one generally accepted measure is a price decline of $20 \%$ or more over at least a two-month period."

The bearish investor sells lots of stock and tends to be pessimistic about the future

## TYPICAL BEAR MARKET

## 1 <br> YEAR $》-3.3 \%$

A typical bear market lasts 1 year, with an average decline of $-33 \%$ per bear market period!*
